Vessel is large, clumsily loaded down w/ white Superstructure aft, a dark colored hull, reddish color decking, dark blue or black funnel w/ top with lighter orange or red band (funnel matches vessel color scheme). Something of interest is located on extreme starboard side, approx $\frac{1}{3}$ of way back from bow, slightly above main dark funnel (See diagram, p. 5a). Associated with this is an impression of several (5 to 10) rounded/cylindrical containers, about 2 ft. high by 1 ft. diameter, made of metal, with which the color yellow is associated. Contents of ~~these~~ these containers remind me of crystallized honey, but there is a bitter/acidic taste associated.
